

RUOYA LI

CREATIVE TECHNOLOGIST · SOFTWARE ENGINEER

Building AI-powered tools for creative workflows.

I design and build systems that connect AI, media, data, and human creative judgment - from working prototypes to usable production workflows.

A bridge between creative intent and technical systems.

My background spans architecture, computational design, software engineering, and applied AI. That lets me move between creative teams and technical systems - turning an ambiguous creative problem into a prototype, then into a usable production workflow.

DramaClips / DramoraAI

A real 0→1 product for a real affiliate workflow.

Short-drama promotion creates a deceptively complex production problem: media arrives in different forms, hooks need judgment, publishing spans multiple platforms, and the business outcome lives downstream in attribution and conversion.

● INPUT

Source media and episode context

● JUDGMENT

AI-assisted hooks plus human review

● OUTCOME

Published content, attribution, commission

Actual DramaClips Hook Studio interface.

From raw media to measurable distribution.

01

ONBOARD

Source media, drama
metadata, reusable assets

02

UNDERSTAND

Transcription, media
inspection, candidate hooks

03

REVIEW

Structured evaluation and
human approval

04

DISTRIBUTE

TikTok · Instagram ·
YouTube · Facebook

05

LEARN

Redirects, referral codes,
attribution, commission

DESIGN PRINCIPLE

Keep AI inside a legible workflow: show candidates, preserve human approval, and carry the data needed to understand what happened after publishing.

AI as a collaborator in the editing loop.

The product uses AI to expand the set of possibilities
- transcribing media, proposing hook candidates, and
organizing signals for review - while keeping the final
creative decision visible and human.

- **GENERATE**
Create several candidate directions from the same source
- **COMPARE**
Make tradeoffs legible through structured fields
- **APPROVE**
Let a person decide what is ready to publish

Actual DramaClips human-review interface.

The creative workflow is also a production system.

I care about the seams where prototypes become dependable tools.

MEDIA	Transcription and clip preparation	Turn long-form source material into inspectable, reusable candidates.
STORAGE	Object storage and asset reuse	Keep outputs available across review, publishing, and later analysis.
INTEGRATION	Platform publishing workflow	Coordinate multiple destinations while preserving status and failure context.
MEASUREMENT	Redirect and attribution paths	Connect the creative workflow to analytics.

Publish Center: one delivery workflow across four platforms.

A portfolio built from shipped work and tested claims.

DramaClips is grounded in a real CPS / affiliate workflow using ReelShort content. The product has generated real affiliate commission. I do not claim unsupported revenue, conversion-rate, audience, or efficiency numbers.

The screenshot shows the DramaClips web application interface. On the left is a dark sidebar with navigation links: Home, Overview, Work Status, Publish Center (selected), Opportunity, Tracking Info, Analytics, and Settings. The main content area displays a table of published items. The table has columns for Title, Status, Action, and a 'Publish Center' button. The items listed are:

Title	Status	Action	Publish Center
Revenge of the Black Lotus	Pending	Published	Published Center
My Favourite Place to Design Studio	Pending	Published	Published Center
My Favourite Place to Design Studio	Pending	Published	Published Center
My Favourite Place to Design Studio	Pending	Published	Published Center
My Favourite Place to Design Studio	Pending	Published	Published Center
My Favourite Place to Design Studio	Pending	Published	Published Center

Selected adjacent work

Computational design and visual systems work show the earlier side of the same practice: translating spatial, visual, and organizational complexity into clear rules and artifacts.

Actual DramaClips publishing history.

Why Snowflake, why this role.

Snowflake's Creative Technologist, Brand AI role sits at the intersection I have been building toward: creative partnership, AI prototyping, connected systems, and adoption.

PARTNER

Translate creative intent into technical possibilities.

PROTOTYPE

Make an idea tangible quickly enough to learn from it.

CONNECT

Design the workflow around people, data, and tools.

ADOPT

Explain the system so teams can actually use it.

Let's make the next version.

Ruoya Li

Creative Technologist · Software Engineer

I build applied AI and workflow systems that turn complex operations into clear product experiences.
